

Python – 101

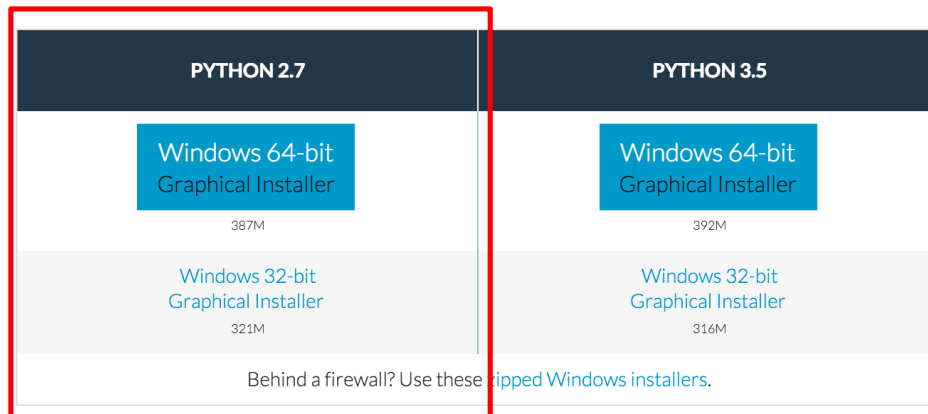

Python Installation Instruction

Anaconda (Spyder)

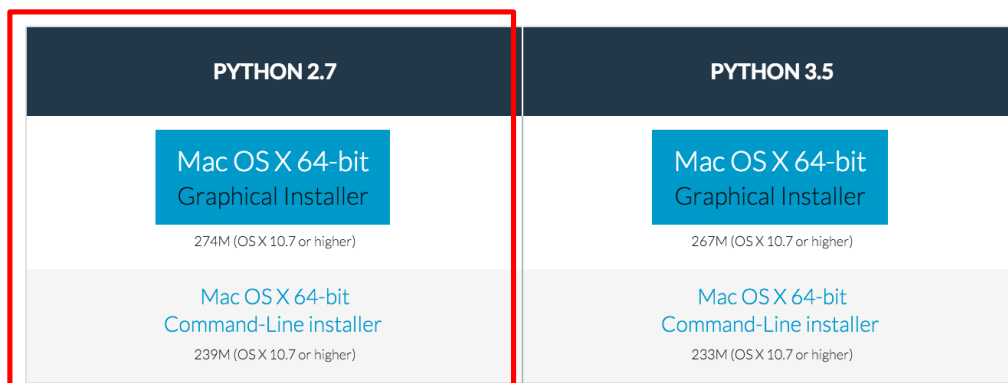

1. **Download Anaconda directly from CONTINUUM** – Anaconda is a python distribution which includes all the common scientific Python packages as well as many packages related to data analytics and big data.

Please install **Python 2.7** and follow instructions below:

Window users: <http://docs.continuum.io/anaconda/install#anaconda-for-windows-install>

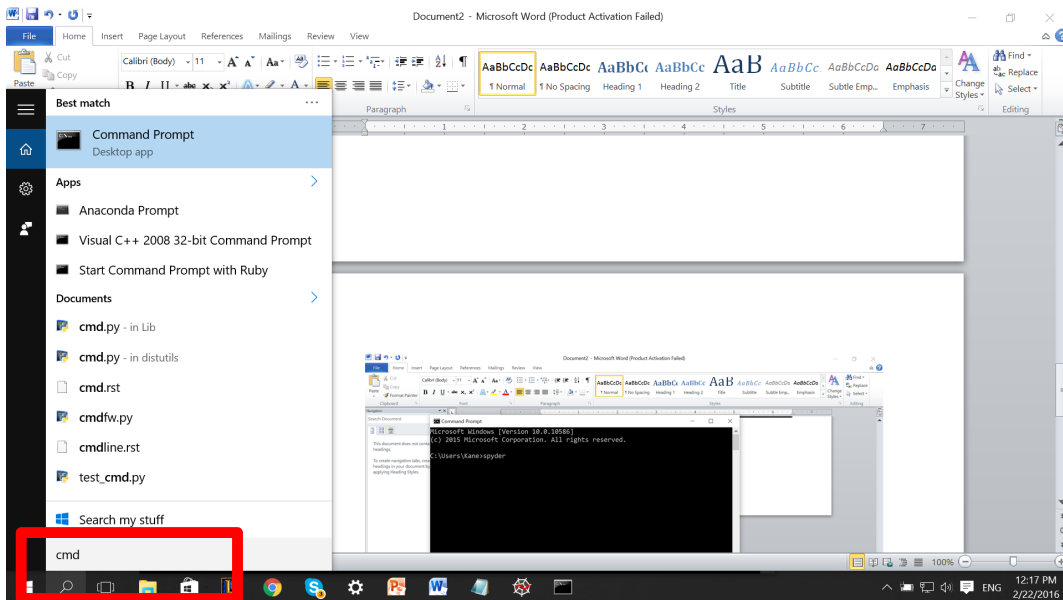

Mac Users: <http://docs.continuum.io/anaconda/install#anaconda-for-os-x-graphical-install>

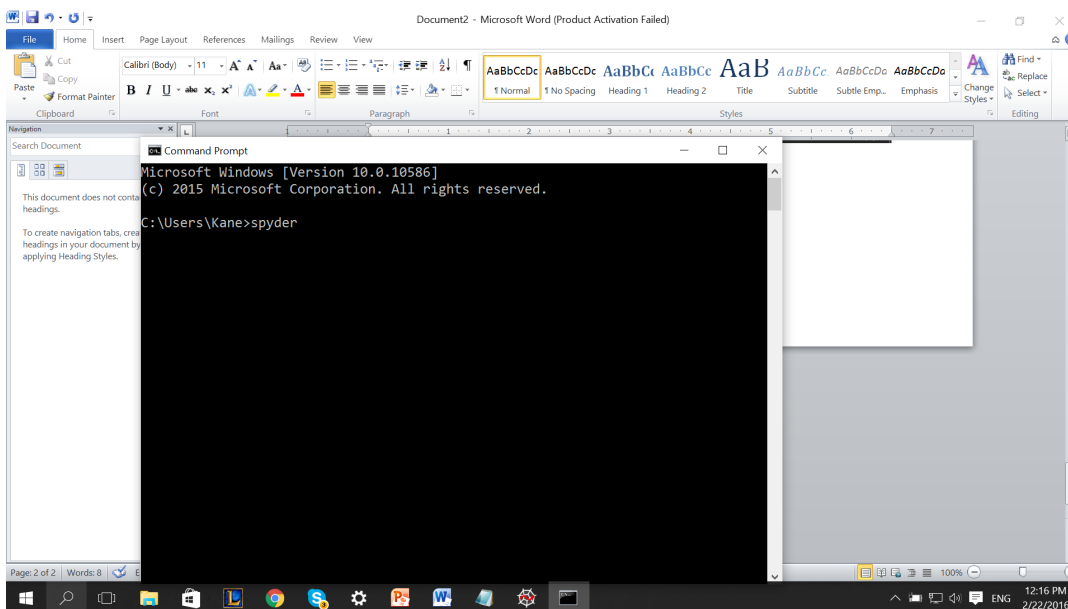

2. **Launch your Python IDE (Spyder) from Anaconda** – Go to your cmd (Window users) or terminal (Mac Users)

Window users: CMD

- 1) Search for “cmd”

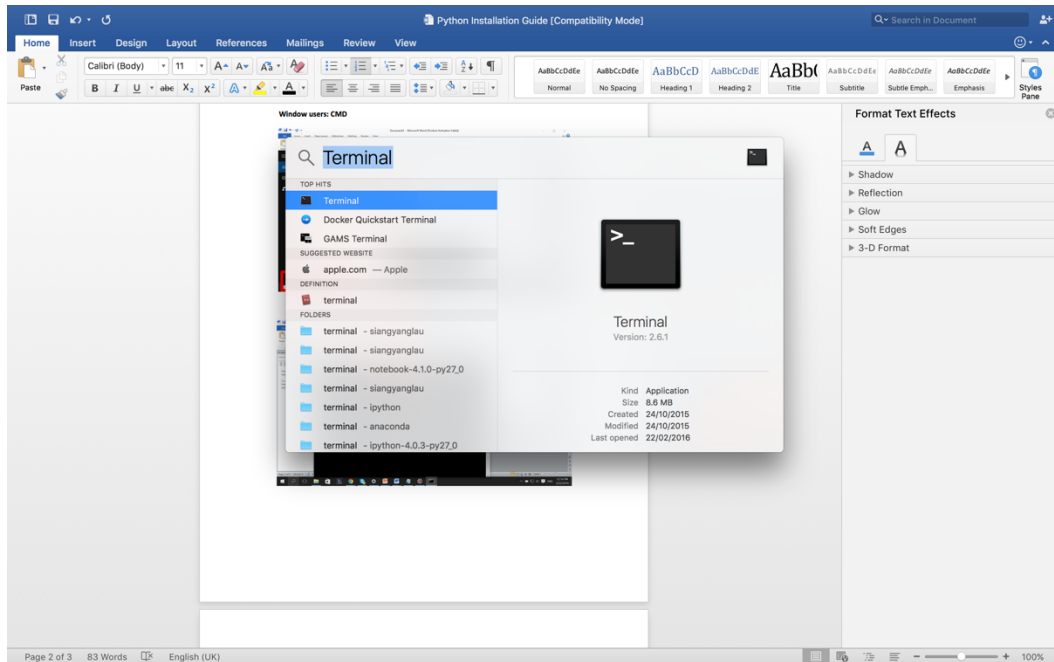

- 2) Type “spyder” in cmd and enter.

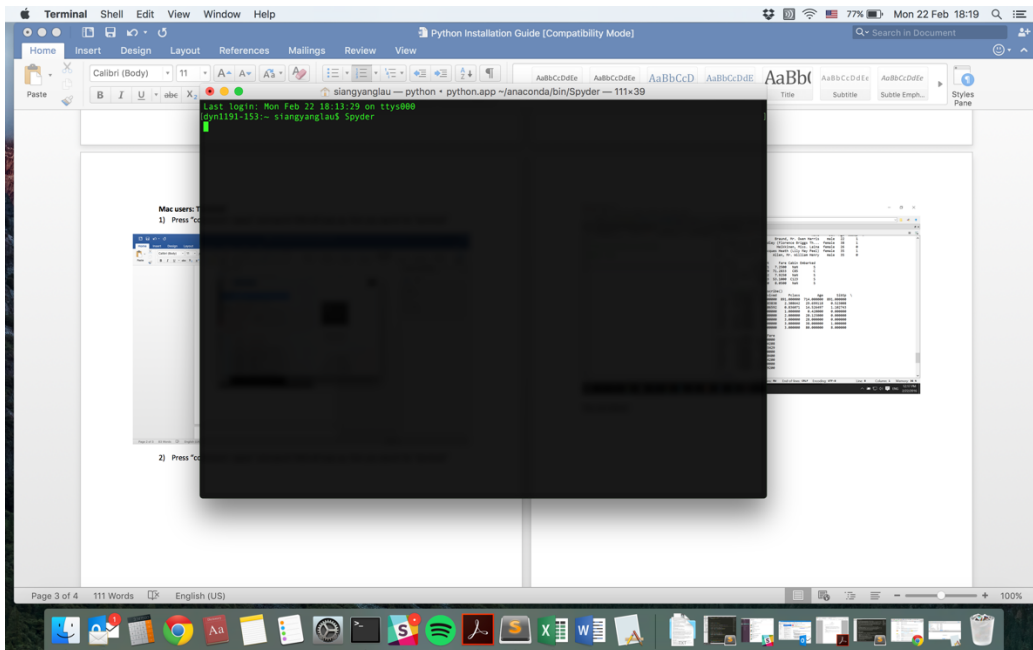

Mac users: Terminal

1) Press “command + space” and search field will pop up, then you search for “terminal”

2) Type “spyder” in terminal and enter.

You are done!
